# 1. Dependencies

To work properly, ensure the robot have access to the following packages:

- MimeKitLite ( $\geq 2.11.0$ )
- Microsoft.Office.Interop.Outlook ( $\geq 15.0.4797.1003$ )

## 2. Send Outlook Mail Activity

The activity lets the robot send a HTML mail via Outlook application with embedded images.

### 2.1. Properties

#### 2.1.1. Account

- **On Behalf** (OPTIONAL)
  - Sends the mail message on behalf of the mail address in this field.
- **Outlook Account** (OPTIONAL)
  - The sender mail address.
  - If not set uses the current default set in the Outlook application.

#### 2.1.2. Headers

- **BCC** (OPTIONAL)
  - Email addresses to receive the email in BCC separated by ';'.
- **CC** (OPTIONAL)
  - Email addresses to receive the email in CC separated by ';'.
- **TO**
  - Email addresses to receive the email separated by ';'.

#### 2.1.3. Message

- **Attachments** (OPTIONAL)
  - A string array with the full path to each of the attachment's files and embedded images.
- **Body**
  - The HTML text to send in the mail body.
- **Subject**
  - The subject of the mail message.

## 2.2. Embedded Images Usage

To embed the images in the html, set in the HTML the image name in the **src** field of an **img** tag.

```

```

Write the full path in the Attachments field.

Message	
Attachments	<input c:\\folder\\example.png\"}"="" type="text" value="{\"/> ...
